

Digital Tachograph Training

As the leading authority in the transport industry within the UK, FTA prides itself on helping the industry understand, plan and implement changes. FTA has developed a range of digital tachograph solutions from information, advice and training, to analysis and interpretation. FTA's experience has found that each company's analogue, digital and mixed fleet requirements are different. So whatever your individual company needs are, FTA can provide a bespoke tachograph solution. The provision of training is critical to the introduction of any new system, and the digital tachograph is no exception. Therefore devising a training plan before you get your first digital vehicle will be crucial to ensuring a successful transition from analogue to digital.

Training tools

To accompany FTA's Train the Trainer course, we are pleased to be able to offer the following essential training tools to enable you to effectively cascade out digital training internally within your organisation. The best way for your staff to learn about digital tachographs is to practice on a simulator; training on the 'live' system could potentially lead to infringements. You will also need to be aware of the vehicle units (VU) being fitted to your new vehicles – training on one type will not guarantee competence on another:

FTA can provide the following training tools

■ Siemens Simulator Case

Price: £2,350 + VAT

(please note that there is a six week order time)

■ Siemens VU Instruction Manual

Price: £7 + VAT

■ Siemens Onscreen Simulator

(CD format)

Price: £120 + VAT

■ Stoneridge Simulator Case

Price: £1,750 + VAT

(please note that there is a three week order time)

■ Stoneridge Onscreen Simulator

(CD format)

Price: £75 + VAT

■ Digital simulator cards

Price: £17.50 + VAT

NOTE: We can also develop internal Powerpoint training presentations and other bespoke training aids on request.
